

EXTREME GLASS

(& HGS)

TECHNIUM
SPACE

Initial requests received invariably include descriptions such as *"We want lots of big windows."*

There is after all, nothing better than natural light-filled free-flowing and open interior spaces.

There are those however, that require more windows than walls! - What we would refer to as 'Extreme Glass'.

No problem. But do appreciate that this will invariably incur higher *(although not necessarily substantial)* than 'average' m2 costs.

Where there are 'no walls', additional HGS structure is also required. Just as in designs with cantilever roofs, projections and unsupported overhangs etc.

The above is an example of all.

We have included below just a few more variations and examples, to show what we mean by 'Extreme Glass' and the frequent need for 'HGS'.
